

WHOLE HOUSE SOLUTIONS

NEWCOMB AND COMPANY offers **WHOLE HOUSE SOLUTIONS** that can determine any areas of energy loss that may be causing your electric bill to rise.

Ask Newcomb and Company's BPI accredited professionals how we can test your home to detect issues such as:

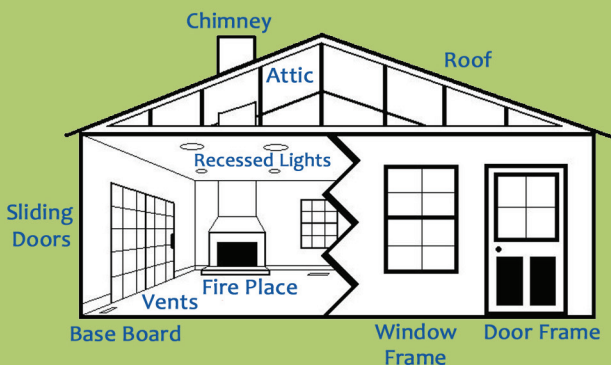

- Poor ventilation
- Sources of unwanted air infiltration:
 - Leaky doors and windows
 - Leaky duct work and exhaust fans
 - Poorly sealed attic accesses
 - Leaky recessed lights and electrical outlets
- Ineffective insulation
- Carbon monoxide concerns
- Gas leakage
- Water intrusion

NEWCOMB
and Company

Your comfort
is our business.

newcombandcompany.com 919.862.3000

While on site, we will complete an evaluation of your home's performance. Our professionals will check for proper insulation, carbon monoxide levels, water management, moisture issues and other areas pertaining to the health of your home.

We can identify your home's problem areas by using tools such as blower doors and thermal imaging cameras. A blower door test creates a negative pressure in your home so measurements can be taken to determine unknown air leaks. A thermal imaging camera reveals hot and cold spots in your home as a result of poor insulation.

When our comprehensive testing and evaluation is complete we will provide a report listing any areas of concern, and recommendations to improve the overall health of your home.

Call **Newcomb and Company** today at **919.862.3000** and speak with our BPI accredited professionals to learn about how we can make your home more comfortable and energy efficient.
