BENEFITS OF A SEALED CRAWLSPACE

How air-tight is your home?

Without realizing it, the air that you heat and cool in your home may be flowing straight outside. Leaky homes are huge energy consumers, difficult to keep at comfortable temperatures, and expose you to breathing in contaminated air.

NEWCOMB
and Company

Your comfort
is our business.

Is your home suffering from the “stack effect”?

During winter months, warm indoor air flows upwards and escapes through any air leaks in your home. At the same time, this flow will draw in cold, damp, moldy air from your crawlspace, if not sealed properly. This is known as the “stack effect” and also occurs in summer months, though the process is reversed.

By sealing your crawlspace, Newcomb and Company’s Building Performance Institute (BPI) accredited professionals can:

- Eliminate air leaks
- Remove contaminated crawlspace air from the indoor air that you breathe
- Reduce your homes inflation rate
- Keep your home comfortable year-round

**Cut energy bills up to 16%: Studies by Advanced Energy*

A well-sealed home is a healthy, comfortable, energy efficient home. Give us a call today and find out how sealing your crawlspace can save you money.

After fully inspecting your crawlspace and removing all debris and existing fiberglass insulation, we seal all air gaps and install an air tight vapor barrier. We use high quality ground cover and offer a fire retardant option for added peace of mind.

Sealed crawlspaces mean you spend less on energy bills to live in a healthier, more comfortable home. The upgrade meets all building code requirements and can be made to any home, regardless of age.

In addition to making recommendations for how your home can be more efficient, we can identify available tax incentives. Our team can also talk with you about high efficiency equipment if you are considering updating your heating and cooling system, as well as other renewable energy options for your home.

Call Newcomb and Company today at 919.862.3000 and speak with our BPI accredited professionals to learn about how we can make your home comfortable and energy efficient.
